2. (Amended) The glazing according to Claim 1, wherein the layer is deposited on the surface of the glazing.

3. (Amended) The glazing according to Claim 1, wherein the layer is deposited on a plastic film and said plastic film is fastened to the glazing.

4. (Amended) The glazing according to Claim 1, wherein the layer comprising at least one hydrophilic polymer.

5. (Amended) The glazing according to Claim 4, wherein the hydrophilic polymer is crosslinked.

6. (Amended) The glazing according to Claim 4, wherein the hydrophilic polymer is a polymer or copolymer of vinylpyrrolidone.

7. (Amended) The glazing according to Claim 4, wherein the layer includes an organic or inorganic absorbent material.

8. (Amended) The glazing according to Claim 1, wherein the layer in the wet state has a porosity of between 0.1 and 1000 cm^3/g.

9. (Amended) The glazing according to Claim 1, wherein the layer in the wet state has pores whose diameter is between 0.05 and 50 microns.

10. (Amended) The glazing according to Claim 1, wherein the antifrosting absorbent layer has a thickness of less than 100 microns.

11. (Amended) The glazing according to Claim 1, wherein the glazing is an insulating glazing unit comprising at least two glass sheets.

12. (Amended) The glazing according to Claim 11, wherein the glazing is a vacuum insulating glazing unit.

14. (Amended) The glazing according to Claim 18, wherein the antifrosting absorbent layer is deposited on the surface of the viewing area which is in contact with a refrigerated environment.

Please add new Claims 15-18.

15. (New) The glazing according to Claim 7, wherein the inorganic absorbent material is porous.

16. (New) The glazing according to Claim 1, wherein the layer in the wet state has pores whose diameter is between 0.1 and 20 microns.

17. (New) The glazing according to Claim 1, wherein the layer in the wet state has pores whose diameter is between 1 and 15 microns.

18. (New) A refrigerated door enclosure comprising the glazing according to Claim 1.
